5) Notice of Informal Patent Application (PTO-152)

Art Unit: 2837

DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 11-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-24 of copending Application No. 09935973 in view of Sheehan and Decker, Jr. et al.

Both sets of claims recite the use of a soundboard comprising a core plate with and fiber coatings that are multidirectional.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/935,975

Art Unit: 2837

3. Claims 6-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Janes in view of Decker, Jr. et al.

Janes et al discloses the use of a composite fiber material construction for acoustical musical instrument for use with soundboard of the body of bowed stringed instruments consisting of a core plate and a fiber laminate which is provided in the region of the outer surfaces of the core plate(column 5, lines 1-15). Janes also discloses the use of long fibers which are embedded in a matrix. The device as taught by Janes also discloses at least one recess surrounded by material regions of the core plate within the are defined by the outline of the soundboard, the total volume of the recesses amounting to at most to 80% (see figure 2)

Janes discloses that one recess in the core plate takes up the entire thickness of the core plate (see figure 3). Janes also discloses that at least one recess (26) occupies only a part of the thickness of the core plate which has individual layers that are composed of fiber and laminates. Janes does not disclose the specific use of a low density core plate.

Decker, Jr. et al discloses the use of a soundboard for a musical instrument comprising a low density core plate (column 5, lines 20-45). Decker also discloses that his plate has different thicknesses (see figure 3)). The device as disclosed by Decker et al also discloses the use of a single or a double layer (column 3, lines 25-32).

It would have been obvious to one of ordinary skill in the art time the invention was made to modify the device as discloses by Sheehan with the low density

Art Unit: 2837

characteristics as disclosed by Decker, Jr. in order to achieve a soundboard with improved acoustic dampening and strengthening.

Response to Arguments

- 5. Applicant's arguments with respect to claims 6-15 have been considered but are most in view of the new ground of rejection.
- 6. Any inquiry of a general nature or relating to the status of this application or filed papers should be directed to the Group receptionist whose telephone number is (703) 308-0956.

Papers related to this application may be submitted to Group 2800 by facsimile transmission. Papers should be faxed to Group 2800 via the PTO 2800 Fax Center located at Crystal Plaza 4. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 O.G. 30 (November 15,1989). The Group 2800 CP 4 Fax Center number is (703) 308-77(22 or 24). Fax numbers that provide an autoreply fax receipt are: for before finals (703) 872-9318 and after finals (703) 872-9319.

For assistance in **Patent procedure, fees or general Patent questions** calls should be directed to the **Patents Assistance Center (PAC) whose telephone**

number is 800-786-9199. Assistance is also available on the Internet at

www.uspto.gov.

For requesting copies of Cited Art, Office Actions or the like, or General Problem solving, calls should be directed to the TC 2800 Customer Service Office whose telephone number is 703-306-3329 or by fax at 703-306-5515.

Page 5

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kim Lockett whose telephone number is (703) 308-7615. The examiner can normally be reached on Monday through Thursday from 7:30 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Nappi, can be reached on (703) 308-3370.
